

## Sertraline (Zoloft)?

Tuesday, 20 October 2009

Has anybody taken Sertraline or Zoloft? I have taken Sertraline for about 5 days. It hasn't really help me reduce my anxiety (Doctor said it would take about a week at least). However the main problem is that I cannot sleep at night. I was told that this is a side effect and that I should go away soon. However I feel really tired in the morning. I took the medication in morning to reduce the impact at night but I still struggle to sleep.

I would appreciate any feedback from anybody that has taken a similar medication

Thanks and have a good day
