

How People Find Us - Search Engine Optimization

Tuesday, 29 April 2008

Last Updated Tuesday, 29 April 2008

I'm often asked how people find Panic Survivor.

The answer is plainly ... Search Engine Optimization. Search Engine Optimization is the process in which we try to improve the ranking of a site through various "on the page" and "off the page" factors. Panic survivor's Content Management System is designed to utilize many "on the page" factors such as Automatic Titling of documents, automatic creation of friendly URLs (.htm instead of some long hard to read file name), automatic creation of meta tags and meta keywords on every page.

Off the page factors primarily rely on link building from other web sites.

But for those of you that are interested the remainder of this document is a list of the searches that people used to find us in the month of April. It's exceptionally long, but some of you might find the list interesting to say the least.
